DeepMood: Modeling Mobile Phone Typing Dynamics for Mood Detection

Bokai Cao, Lei Zheng, Chenwei Zhang, Philip S. Yu, Andrea Piscitello, John Zulueta, Olu Ajilore, Kelly Ryan, Alex D. Leow

(Submitted on 23 Mar 2018)

The increasing use of electronic forms of communication presents new opportunities in the study of mental health, including the ability to investigate the manifestations of psychiatric diseases unobtrusively and in the setting of patients' daily lives. A pilot study to explore the possible connections between bipolar affective disorder and mobile phone usage was conducted. In this study, participants were provided a mobile phone to use as their primary phone. This phone was loaded with a custom keyboard that collected metadata consisting of keypress entry time and accelerometer movement. Individual character data with the exceptions of the backspace key and space bar were not collected due to privacy concerns. We propose an end-to-end deep architecture based on late fusion, named DeepMood, to model the multi-view metadata for the prediction of mood scores. Experimental results show that 90.31% prediction accuracy on the depression score can be achieved based on session-level mobile phone typing dynamics which is typically less than one minute. It demonstrates the feasibility of using mobile phone metadata to infer mood disturbance and severity.

Instagram photos reveal predictive markers of depression

Andrew G. Reece^a, Christopher M. Danforth^{b,c}

Abstract: Using Instagram data from 166 individuals, we applied machine learning tools to successfully identify markers of depression. Statistical features were computationally extracted from 43,950 participant Instagram photos, using color analysis, metadata components, and algorithmic face detection. Resulting models outperformed general practitioners' average

Screening for Pancreatic Adenocarcinoma Using Signals From Web Search Logs: Feasibility Study and Results

John Paparrizos, MSc, Ryon W. White, PhD , Eric Horvitz, MDPhD
Columbia University, New York, NY; and Microsoft Research, Redmond, WA

Abstract

Abstract

Choose

Introduction:

People's online activities can yield clues about their emerging health conditions. We performed an intensive study to explore the feasibility of using anonymized Web query logs to screen for the emergence of pancreatic adenocarcinoma. The methods used statistical analyses of large-scale anonymized search logs considering the symptom queries from millions of people, with the potential application of warning individual searchers about the value of seeking attention from health care professionals.

DG CNECT A2 - Technologies and
Systems for Digitising Industry
Max.lemke@ec.europa.eu

Disclaimer: The Digital Europe Programme and its proposed budget are under discussion with Council and European Parliament and subject to final modifications and approval.

European organisations are not making the most of all the opportunities digital has to offer

Highly digitised companies across Europe

Countries

Sector

Size

Adoption of eGovernment*

Above 75% in Sweden,
Finland, Estonia, Denmark,
Netherlands and UK

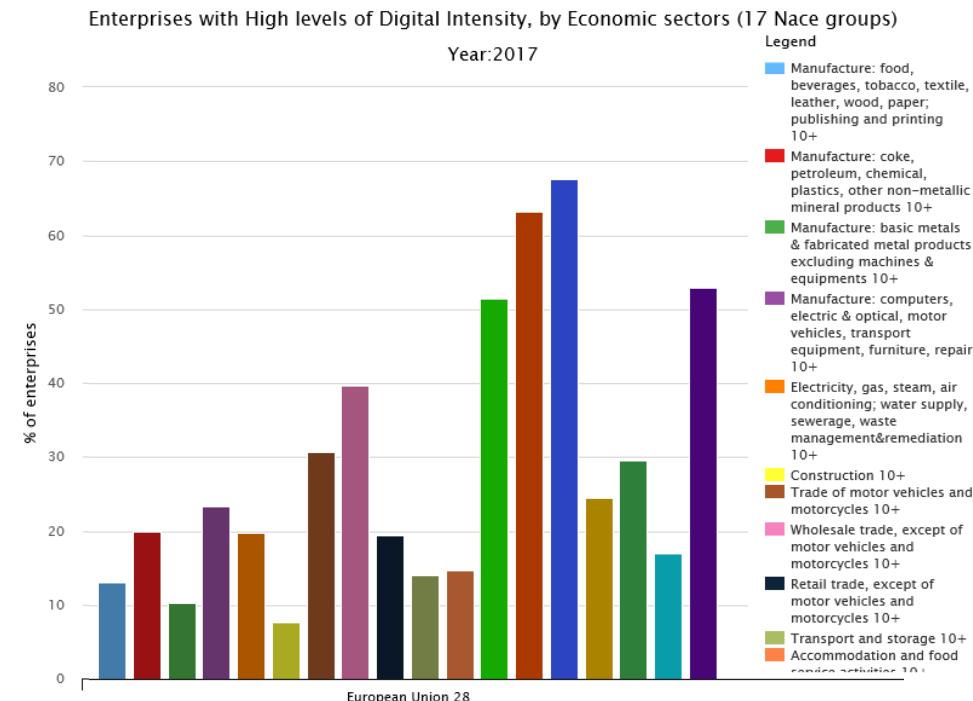

Below 30% in Italy,
Greece and Czech
Republic

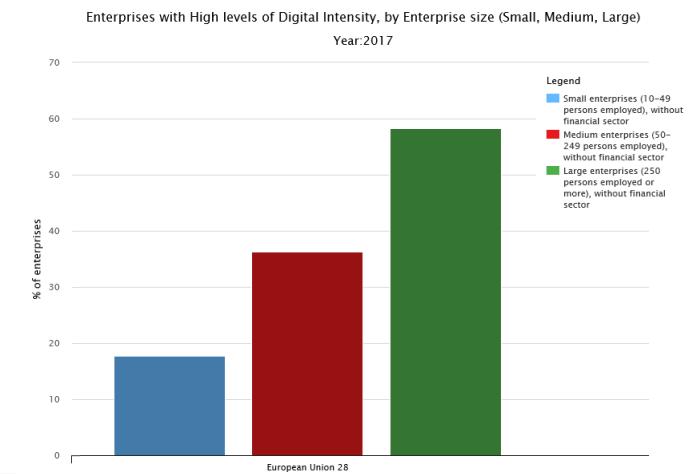

* Adoption captures the extent to which use of the online channel is widespread among users of government services

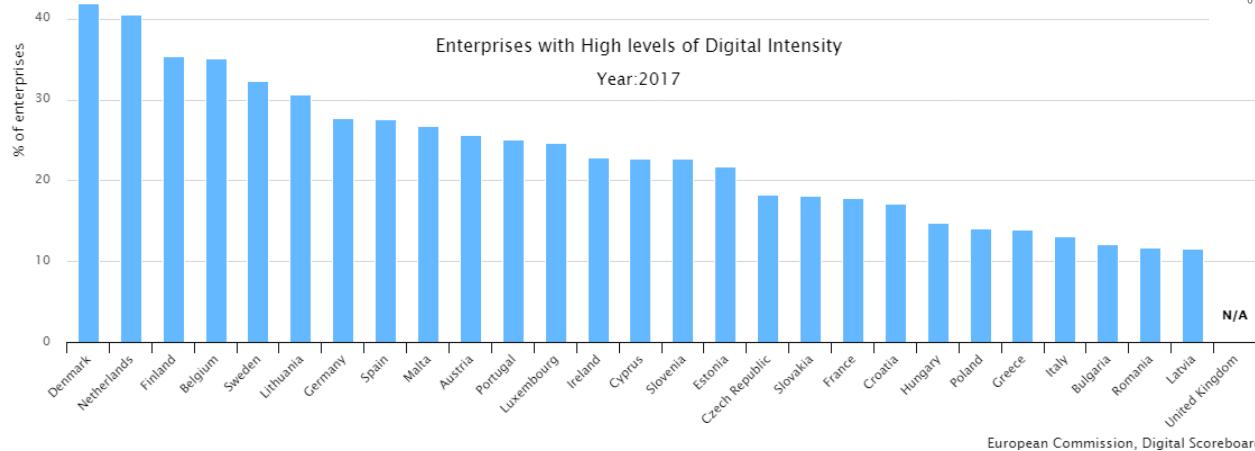

Level of digitalisation vs size of company, sector, and country

68% of companies in computer programming, consultancy and information services are highly digitised.
Only around 8% of companies in construction are highly digitised.

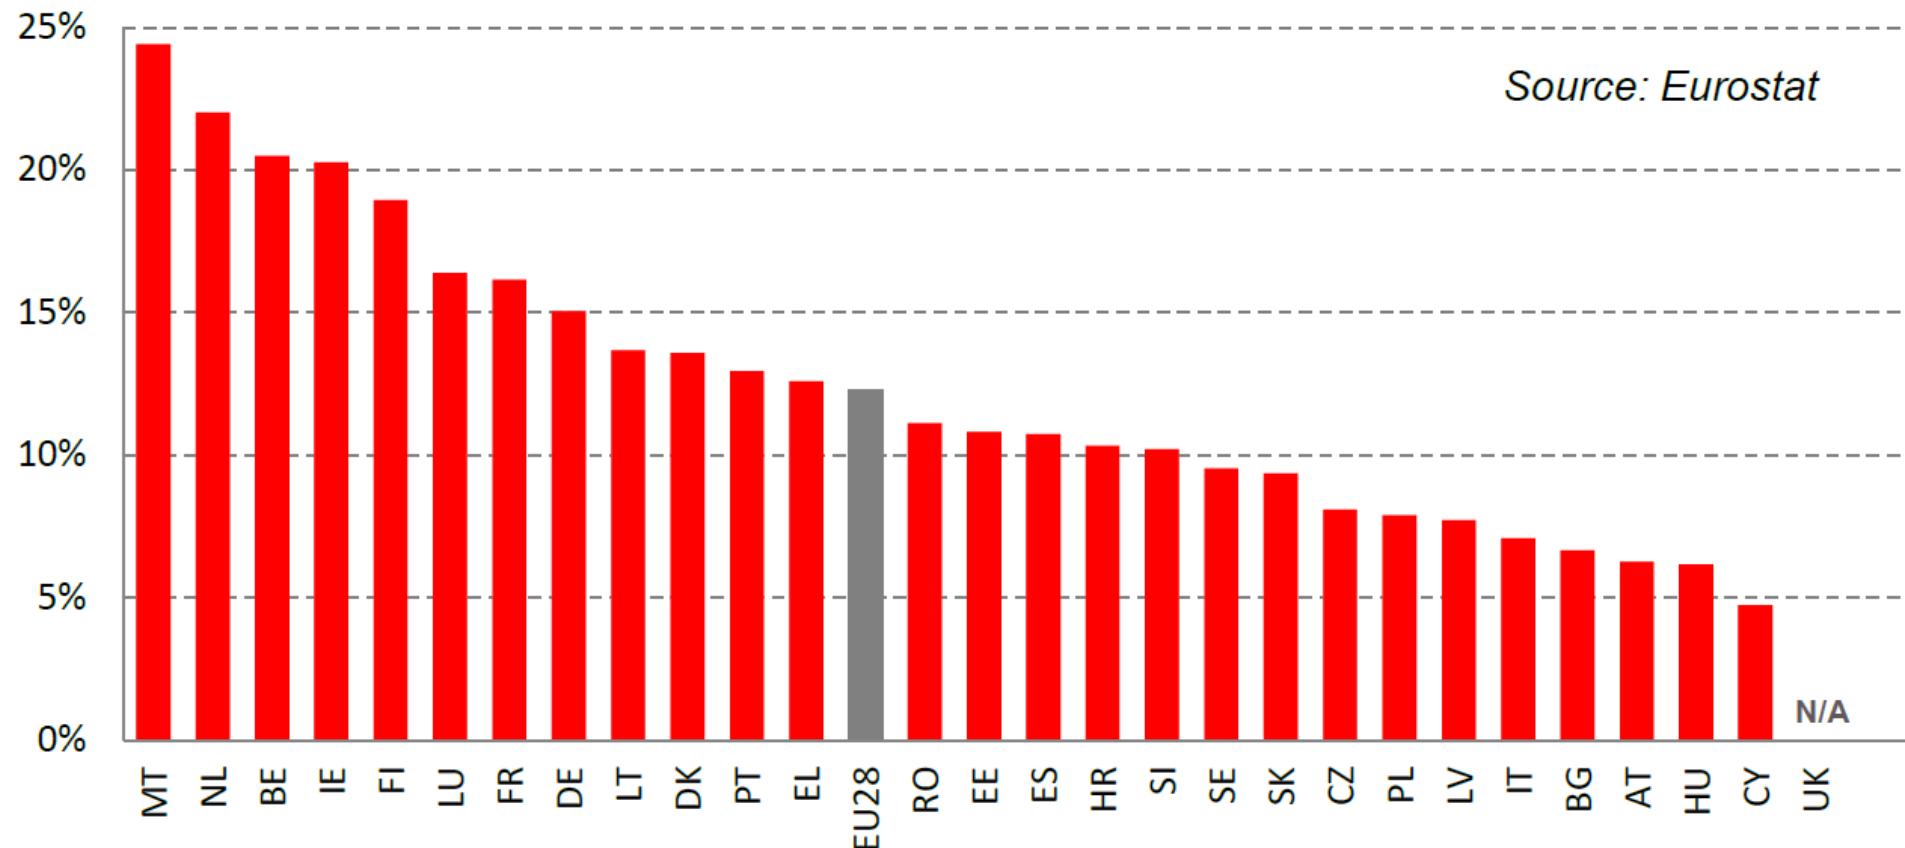

58% of large companies is highly digitised in EU vs 18% of SMEs

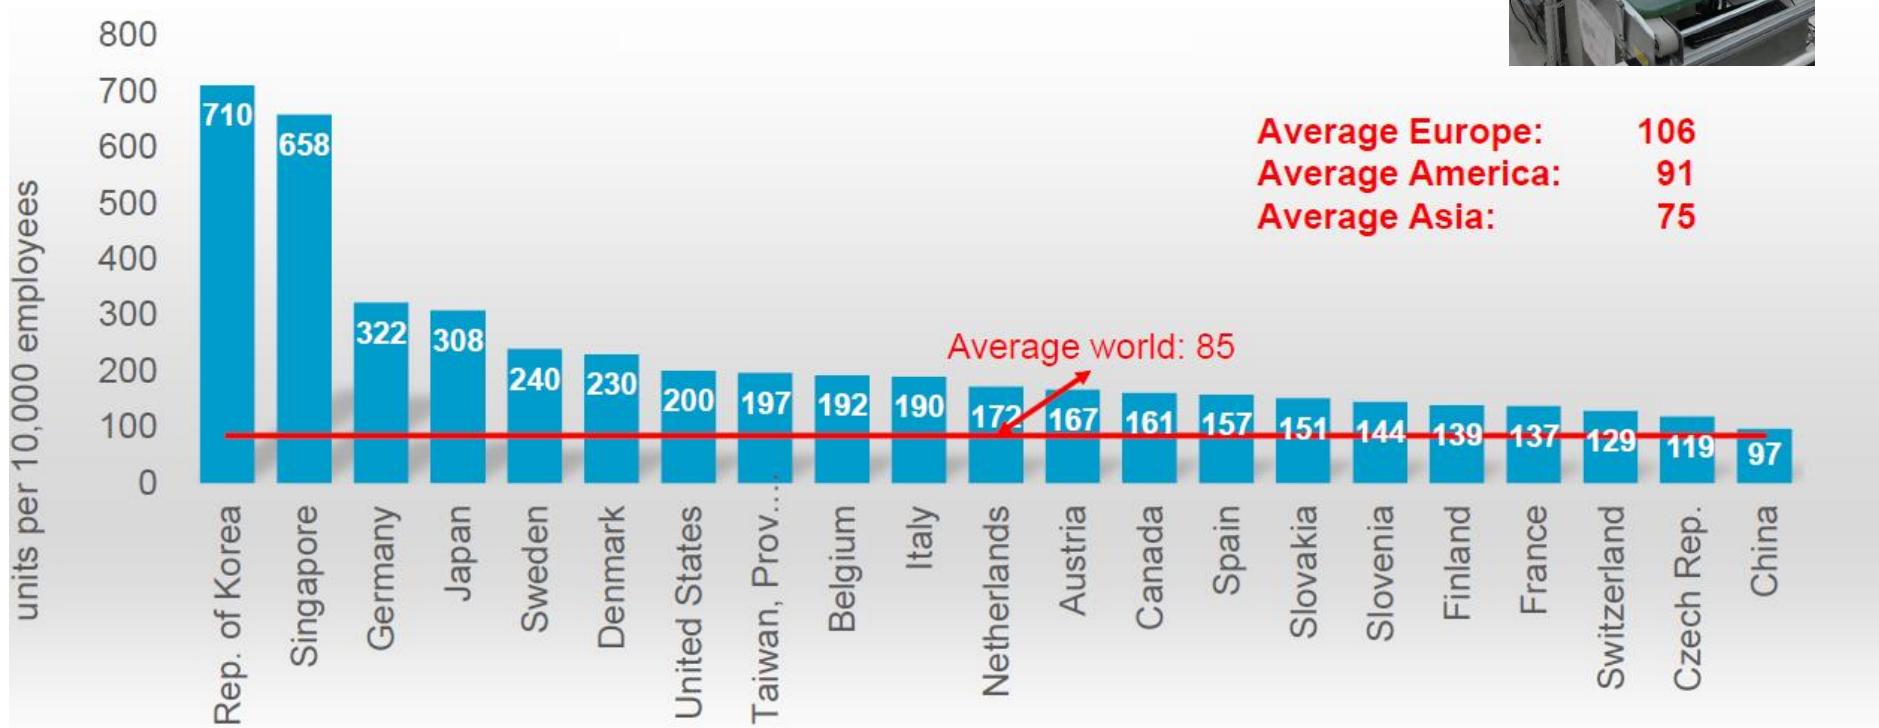

Only a fifth of companies in EU-28 are highly digitised, but 40% of companies in Denmark and the Netherlands and around 12% in Bulgaria, Romania and Latvia.

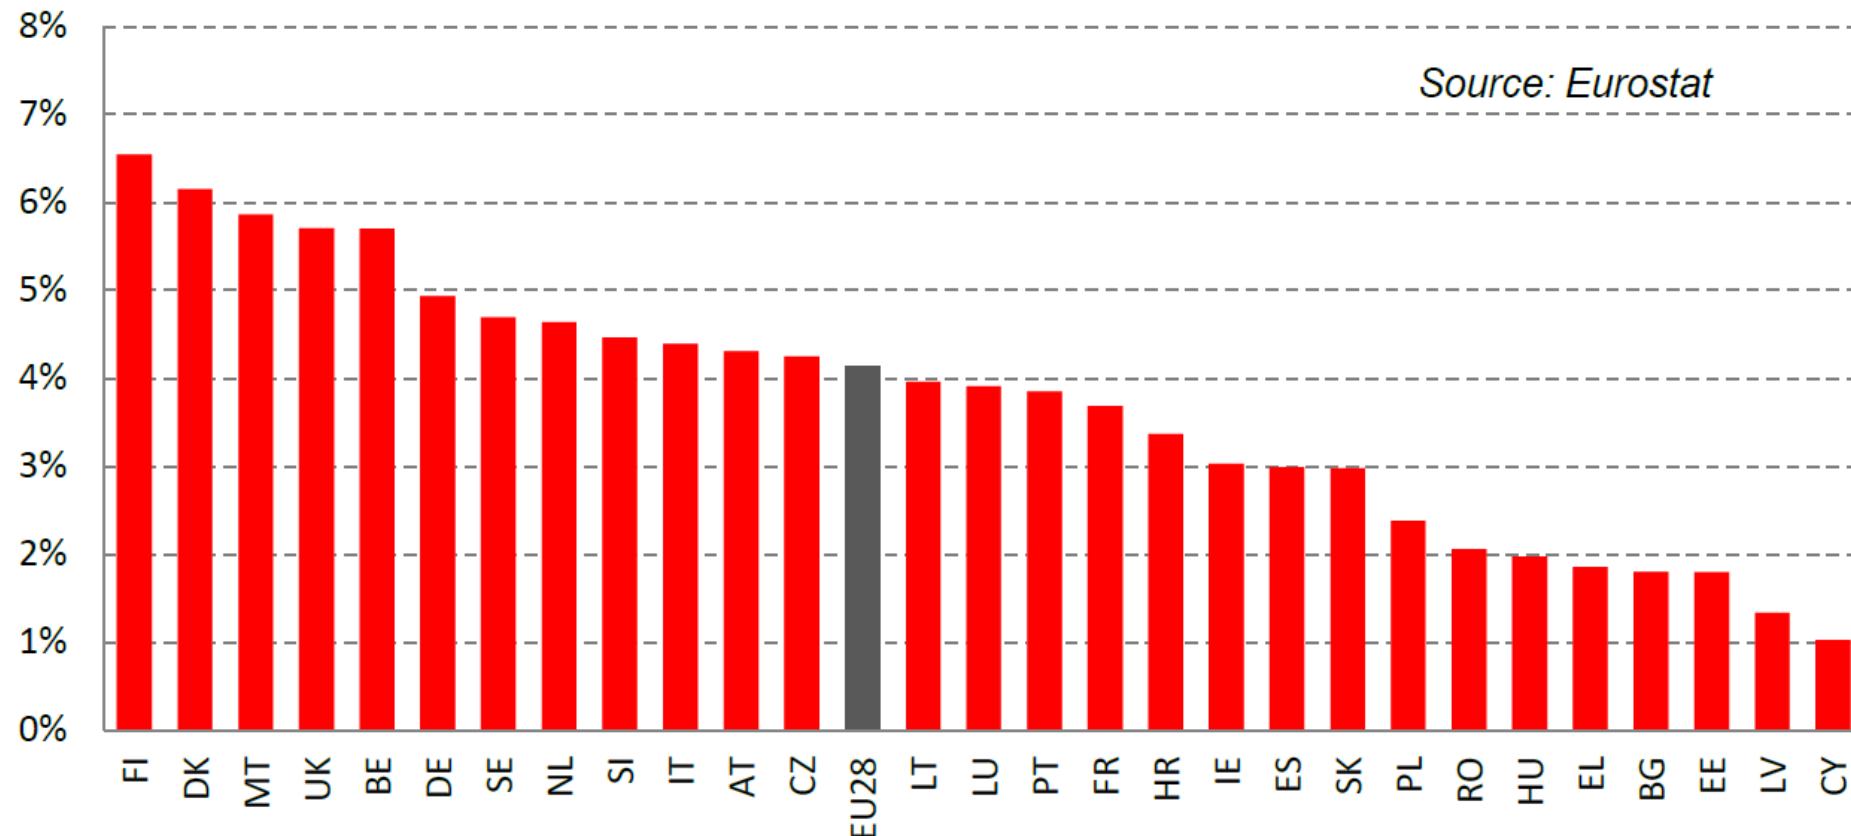

- Enterprises analysing big data from any data source, 2018 (% of enterprises)

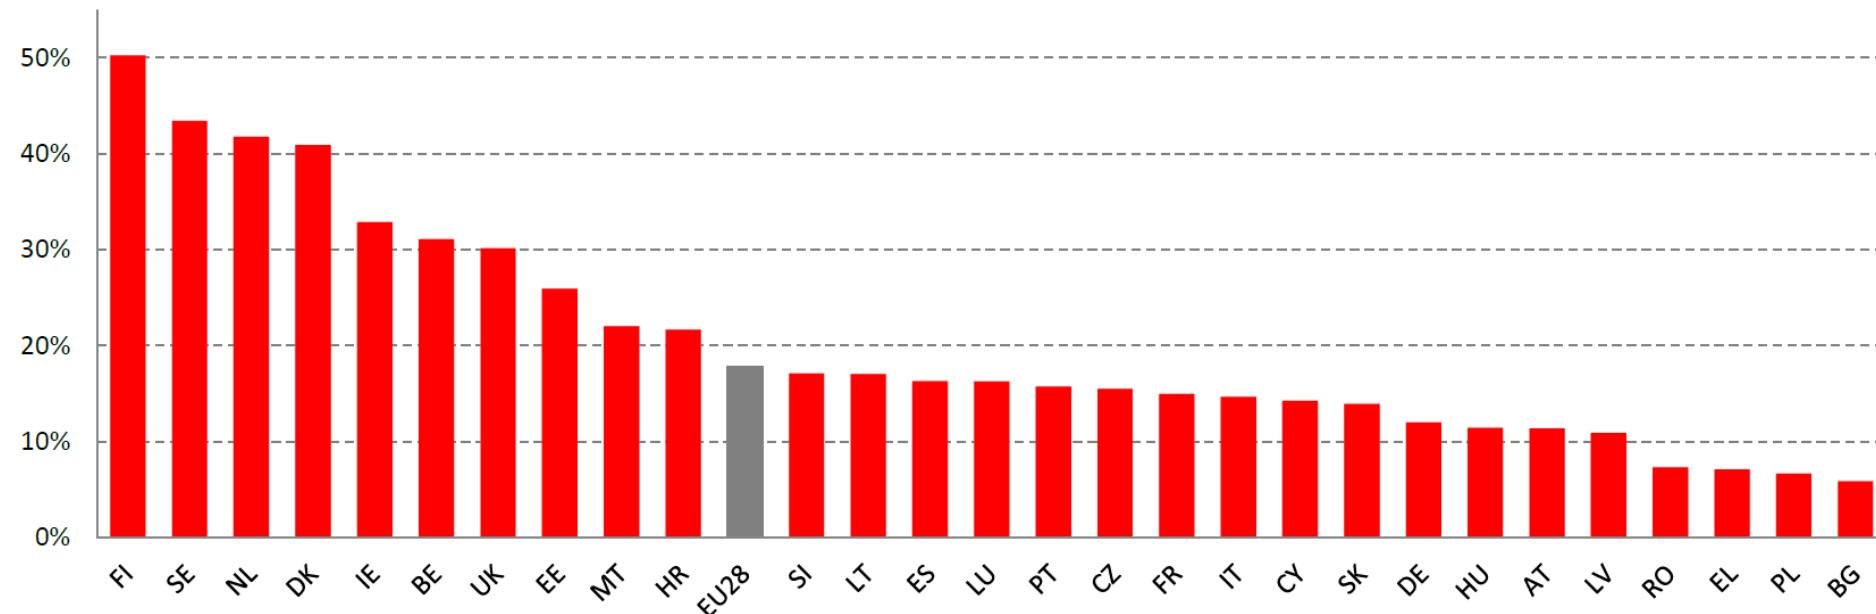

- Number of installed industrial robots per 10,000 employees in the manufacturing industry 2017

- Enterprises using 3D printing services, 2017
(% of enterprises)

- Cloud computing services of medium-high sophistication, 2018 (% of enterprises)

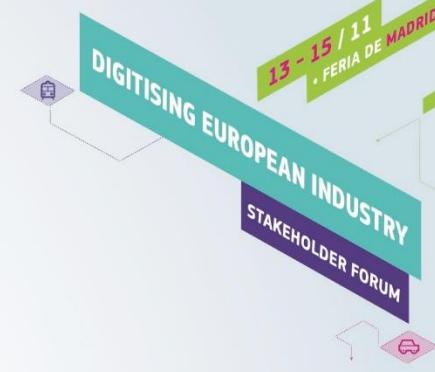

“ensure that Europe fully grasps the potential of the digital age and strengthens its industry and innovation capacity”

Political guidelines
President-Elect Ursula von der Leyen

The European approach to digitalisation

- Worldwide wave of digitalisation, increasingly critical for SMEs
- European approach to build critical mass is joining forces
- 2016 strategy for Digitising European Industry
- 2018 an Artificial Intelligence for Europe
- Unfolding implementation of the digitalisation of the economy
 - Ambitious mobilisation of at least 50 billion by 2020
- Artificial Intelligence: a balance of leadership and European values

A Europe fit for the digital age

The network of Digital Innovation Hubs

- From a concept to a pan-European network of over 240 operational Digital Innovation Hubs
 - 500 Start-ups, SMEs and mid-caps tested digital innovations in collaboration with more than 150 DIHs in 370 innovation experiments
 - €500 million EU investments from Horizon 2020 (2016-2020)
 - Dedicated coaching for 64 Digital Innovation Hubs in the EU13 and in regions with slower adoption of digital technologies
 - A pilot risk-coverage scheme under COSME launched in October 2019 for loans to SME for their digital transformation.
 - Proposed Digital Europe Programme: a systematic approach to building the strategic digital capacities of the EU and on facilitating the wide deployment of digital technologies

#DigitiseEU
#DEIforum

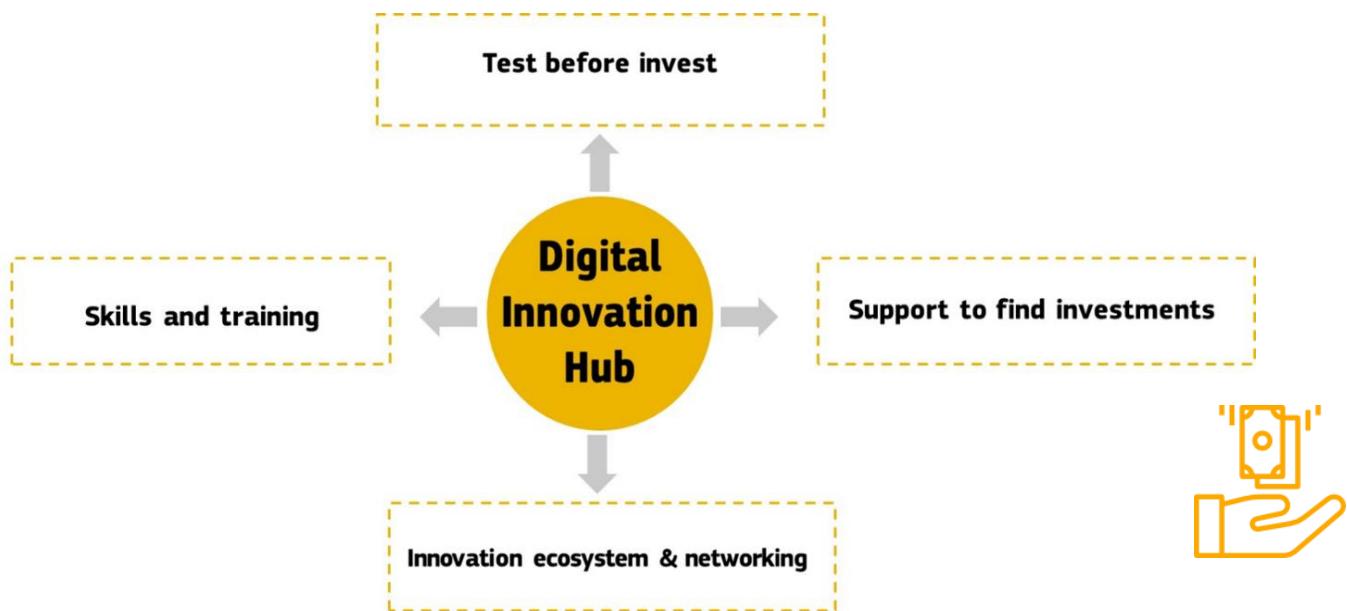

2021: further reinforcing EU capacities

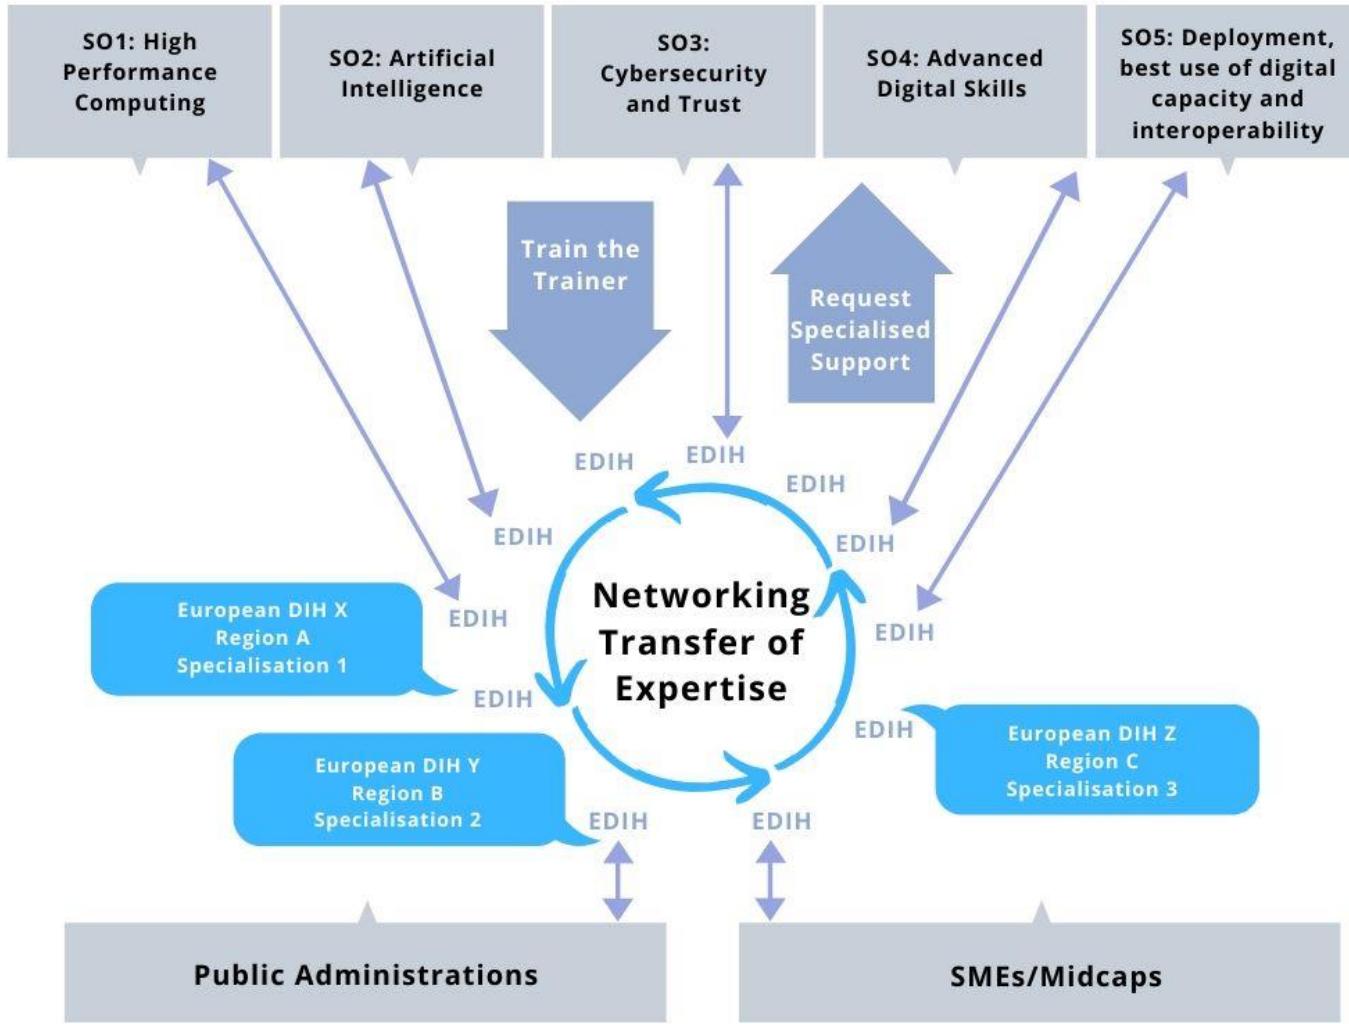

A 9.2 billion proposed *Digital Europe Programme* to:

- **Compete globally and achieve scale** through joint co-investments
- Regain **control over Europe's value chains** and ensure Europe's **strategic autonomy**
- Better address **Europe's economic and societal challenges**
- Ensure **broad take-up of digital technologies** across all regions of EU by reinforcing innovation capacities

European Digital Innovation Hubs provide technological expertise and experimentation facilities to enable the digital transformation of the industry and the public sector

- DIH bring together competences in targeted consortia, typical participants:
 - RTOs, Technical Universities, ...
 - Competences from industry associations & clusters, innovation agencies, incubators, ...
 - DIH consortia can be x-border
 - DIH consortia must be efficient & effective
- DIH are the local interface to EU-wide digital expertise and capacities
- DIH have minimum 50 % co-investment from Member States and/or Regions
 - Structural Funds can be used for MS part
 - Contribution can be in-kind or in-cash

Working and Investing together across the Digital Europe Programme

Allocated at
European level

Horizon Europe: Support to SMEs and mid-caps to experiment with innovative digital technologies in a cross-border setting.

Digital Europe: Support to facilities and personnel - focus on broad roll-out of the latest digital innovations across SMEs and administrations.

InvestEU: Incentives and risk reduction programmes to help companies find follow-up investment to further complete their digital transformation.

European Regional Development Fund:
Investments to strengthen local operations of DIH – can be used for co-financing EDIH

Allocated at
national level
